Solar Coach Light G2

The Solar Coach Light is a commercial solid metal light fixture with integrated solar modules, designed to light streets and yards. The G2 differs from the G1 only by using three larger triangular shaped solar modules forming a pyramid removing the flat top solar module. The pyramid shape also allows snow to slide off rather than accumulate on the top of the light. It has 42 powerful extra-bright LEDs, 22 watts of charging solar modules, an automatic on/off light sensor and a 12-volt, 12 amp-hour sealed battery. This is no garden light. The Solar Coach Light G2 **will stay on over 30 hours (that's 2-4 nights depending on time of year)** without sunlight charge. The solar modules are guaranteed for 10 years and are made of tempered glass, monocrystalline and Tedlar lamination (just like large commercial-grade modules). The battery should last 1-3 years, depending on temperature, and the LEDs should last 30,000 hours. The Solar Coach Light offers a sustainable, eco-friendly, reliable, and beautiful alternative.

Approx. Dimensions: 17.5" x 17.5" x 16"

Approx Illumination: 60' diameter on Ground

Weight: 32 lbs. (approx) including lead acid battery
