

Solar Power Pony

The Solar Power Pony (SPP) is the most versatile solar light of all of the **American Solar Electric** self contained lighting solutions. This unit is used to light the entrances to housing communities, landscaping, as well as signs, bus stops/ benches with their advertising, car ports, campground and beach bathrooms, trail markers for the forest, and most of all "indoor" solar lighting . This unit comes with 3 units of 27 LED light bulbs and fixtures or 4 units of 18 LED light bulbs and fixtures. It has a sealed strong steel box treated with a rust resistant coating then also powder coated over this, with a 18 WATT solar module as a top with tamper resistant screws to hold it shut. Inside this box is a completely USA built charge controller and a 12 volt 12 amp hour battery. This unit, as ALL of **American Solar Electric** lights, is designed to run for 30 hours (2-3 nights) on a single days charge from the sun.

*This Lighting solution can be mounted on a pole, on a wall or on the roof . Two separate mounting brackets are included in this turn-key lighting solution. This makes the **Solar Power Pony (SPP)** ideal for Landscaping use.*
