

Sun-Mar Garden Composters

\$299.00

The **Sun-Mar 200** is the smallest of the three composters. Excellent for composting kitchen scraps and a few cut up garden trimmings.

Material is added by sliding the input door open. To mix and aerate the compost, the drum is rotated using four finger friendly slots running along the outside of the drum.

Compost is removed by opening the output port, rotating the drum and allowing compost to fall from the inner drum into a bushel basket or other container.

The diagram shows how material moves into and along the outer drum. A scoop on the inner drum (not shown) collects material and pushes it along the inner drum, exiting through the output port.

\$475.00

The **Sun-Mar 400** is considerably bigger than the 200, but otherwise it works on the same principle as the 200. The 400 is a continuous composter designed for composting kitchen scraps and a cut up materials from small garden.

- Drum Volume: 195 Liters (approx: 6 bushel or 50 gallon)
- Height: 31"
- Depth: 24"
- Overall Length: 33.5"
- Product weight: 38 lbs

SUN-MAR 200

- Drum Volume: 366 Liters (approx: 11 bushel or 100 gallon)
- Height: 36"
- Depth: 28"
- Overall Length: 42"
- Product weight: 60 lbs

SUN-MAR 400

Material is added to the 400 by sliding the input door open. To mix and aerate the compost, the 400 drum is rotated by turning a shaft on which a small gear bears directly against the gear teeth on the drum.

The 400 has a sample bottle of Compost Swift which you can use diluted by 8 to 1 to help get your composter going.
